central Bohemia**

Abstract. *Cynaeus angustus* (J. L. Leconte, 1851) firstly collected in central Bohemia.

INTRODUCTION

The saprophagous species mentioned here, living in the Nearctic Region (Bousquet & Campbell 1991), was introduced into northern and central Europe - firstly listed from Finland (Mannerkoski & Ferrer 1992), known from France (Denux & Zagatti 2010 and Soldati & Godinat 2013), Germany (Reibnitz & Schawaller 2006), Poland (Ruta et al. 2017), Russia (Kovalenko et al. 2016), Sweden (Andersson & Ferrer 1989) and Ukraine (Loboda 2013).

From the Czech Republic reported recently as adventive species from Moravia (Mantič & Vávra 2017). First record of this species from Bohemia was added by Novák et al. 2019.

FAUNISTICS

***Cynaeus angustus* (J. L. Leconte, 1851)**
(Fig. 1)

Fig. 1. Habitus of *Cynaeus angustus* (J. L. Leconte, 1851).

Material examined. (1 spec.): Bohemia centralis, Chotutice (5955), 28.vii.2020, on light, V. Novák lgt., coll. and det. Together with near threatened species *Polistichus connexus* (Geoffroy, 1785) (Veselý et al. 2017: Coleoptera: Carabidae), *Eucinetus haemorrhoidalis* Morawitz, 1862 (Vávra 2017: Coleoptera: Eucinetidae) and *Seropalpus barbatus* (Schaller, 1783) (Konvička 2017: Coleoptera: Melandryidae). **First occurrence in central Bohemia.**
